Automated Email Forensics & Threat Intelligence

DIGITAL FORENSIC INVESTIGATION REPORT

Case ID	TT-20260908-DEMO1234
Classification	BEC
Threat Score	**94/100**
Risk Level	CRITICAL
Generated	2026-09-08T12:11:28.486437+00:00

CONFIDENTIAL FORENSIC EVIDENCE

1. Executive Summary

The message exhibits characteristics of a business email compromise attempt.

Classification: BEC

Threat Score: 94/100

Risk Level: CRITICAL

Psychological Tactic: False urgency and authority bias

2. Email Details

Field	Value
From	CEO <ceo@micros0ft-finance.com>
To	accounts@company.com
Subject	URGENT: Wire Transfer Required
Date	Tue, 08 Sep 2026 10:30:00 +0000

3. Email Authentication

Authentication	Result
SPF	FAIL
DKIM	FAIL
DMARC	FAIL

4. Origin Trace / IP Intelligence

Field	Value
Originating IP	185.220.101.5
Origin Confidence	HIGH
Country	Netherlands
Region	N/A
City	N/A
ISP	Tor Exit Relay

Forensic note: the originating IP is the earliest public IP observed in the available Received-header chain. It is not, by itself, proof of the attacker's physical location or identity.

5. URL Intelligence

Total URLs: 1 **Suspicious URLs:** 1 **URL Risk:** 90/100

URL	Domain	Risk	Severity
https://micros0ft-finance-login.xyz/verify	micros0ft-finance-login.xyz	90	CRITICAL

6. Indicators of Compromise

1. SPF failed

2. DKIM failed
3. DMARC failed
4. Possible Microsoft typosquatting
5. Urgent financial transfer request

7. Explainable Evidence

1. SPF failed — HIGH (20 points)
2. DMARC failed — HIGH (20 points)
3. Financial transfer language detected — CRITICAL (20 points)

8. Evidence Integrity

Artifact	SHA-256
Original Email	aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa
Forensic Evidence	bbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbb

SHA-256 hashes can be recalculated later to verify that the corresponding evidence representation has not changed.

9. Investigator Notes

• This report is generated automatically by Threat-Trace.

• Risk scores are analytical indicators and should be reviewed by an investigator.

• Received headers may be forged or altered before reaching the analysis system.

• IP geolocation represents network-location metadata and does not establish a person's identity.

• AI-generated conclusions should be corroborated with email headers, authentication results, URLs, and other evidence.
